

# pavers concrete & clay

cost effective, durable and attractive surfacing material

Pavers are widely recognised as a cost effective, durable and attractive surfacing material. They are extremely versatile and are used on projects as diverse as industrial loading areas, major roads, docksides, pedestrian precincts and driveways.

	Size mm (nominal)	Thickness mm (nominal)
<b>*Concrete Pavers</b>	200 x 100	50 & 60 (80 & 100 to order only)
<b>Clay Pavers</b>	215 x 102.5	50 & 65 (80 & 100 to order only)

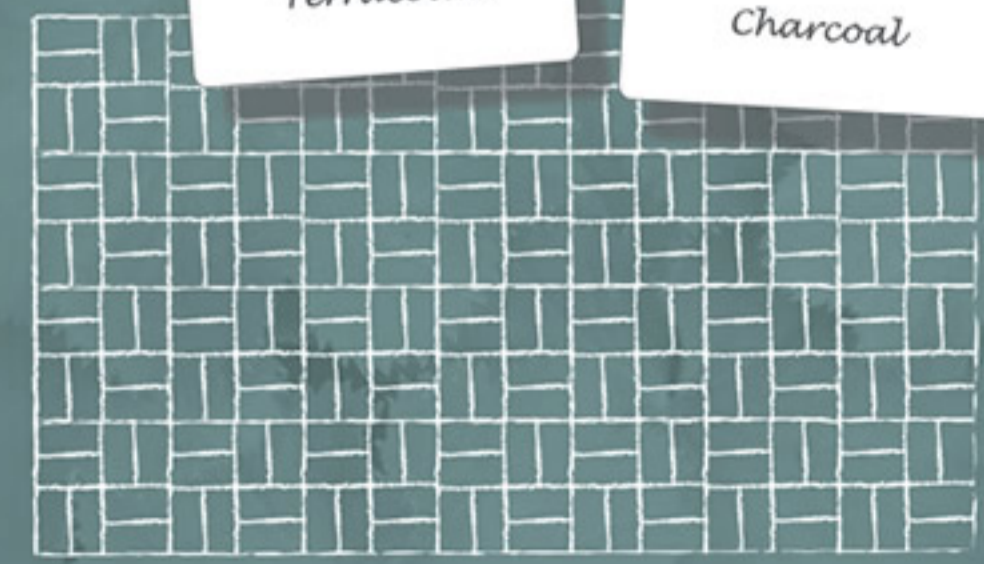

*\* Spacer nibs are incorporated into each concrete paver to standardise joint widths and a chamfer on all top surfaces*

**Recommendations for laying both Concrete & Clay pavers are available from our technical department on request**

**Clay Pavers**  
 Being extremely hard and durable and with their rustic appearance and colour blend, Clay pavers offer unsurpassable visual satisfaction. Which makes them especially suitable for restoration projects, as well as general use in new builds.

For our extensive range of colours available please contact our Sales Office

**Concrete Pavers**  
 Manufactured from high strength concrete, pavers are structurally unaffected by frost, de-icing compounds, oil, petrol, grease and minerals. Pavers provide excellent skid resistance for both vehicles and pedestrians.
